ZoneCapture
built for NetSuite

Why You Need ZoneCapture

ZoneCapture is a native SuiteApp that automates vendor bills and credits creation and processing. Using OCR and auto-learning technology, PDFs and e-invoices are automatically created and processed with no manual entry, errors, or hassle. Without leaving their NetSuite screen, customers can reduce manual processing by 83% and eliminate errors in data entry.

JOINT NETSUITE CUSTOMERS

Who We Are

Zone & Co exists to help their customers get the best out of NetSuite. We do this by developing affordable, on-platform SuiteApps that remove unnecessary manual and paper-based processes within a customer's NetSuite setup.

We develop our SuiteApps specifically for NetSuite, within NetSuite, and driven by existing NetSuite customer challenges – so you can be sure that they are practical and work in the real world. We build our apps for NetSuite and have won several NetSuite awards, including International SDN Partner of the Year 2017.

How We Extend NetSuite

Every NetSuite customer needs to process vendor bills and credits. Where other automation solutions may require customers to use an external interface and database, ZoneCapture enables them to manage the process entirely within NetSuite. Harness native NetSuite functions and extend existing customizations and workflows without worrying about compatibility with external apps.

With minimal manual entry, users, approvers, and auditors can view tailored dashboards, reports, transactions, and corresponding documents side-by-side, without leaving NetSuite.

Features

- OCR, auto-learning and e-Invoice capture
- Capture additional fields and extend existing workflows & customizations
- PO matching, line-level recognition & supplier auto-processing
- Split-screen view and transaction dashboard

Benefits

- 83% Reduction in Manual Processing
- Improved Accuracy & Speed in Transaction Creation
- Completely Native to NetSuite – no need for external inferaces or databases
- Affordable, Easy-to-Install & Easy-to-Use

Our Solution

ZoneCapture was designed and developed along with NetSuite customers who wanted to eliminate the manual creation of vendor bills & credits without implementing a solution external to NetSuite. Using OCR and auto-learning technology, PDFs and E-Invoices are created and processed automatically within NetSuite down to line-level detail, reducing manual entry by over 83% and eliminating errors.

As a Native SuiteApp, users do not need to change systems, and you do not need to worry about integrating custom fields or workflows with an external solution.
