

Tactical Connect

Export with ease

Easily extract your NetSuite data, without worrying about the timeouts or the size of your datasets.

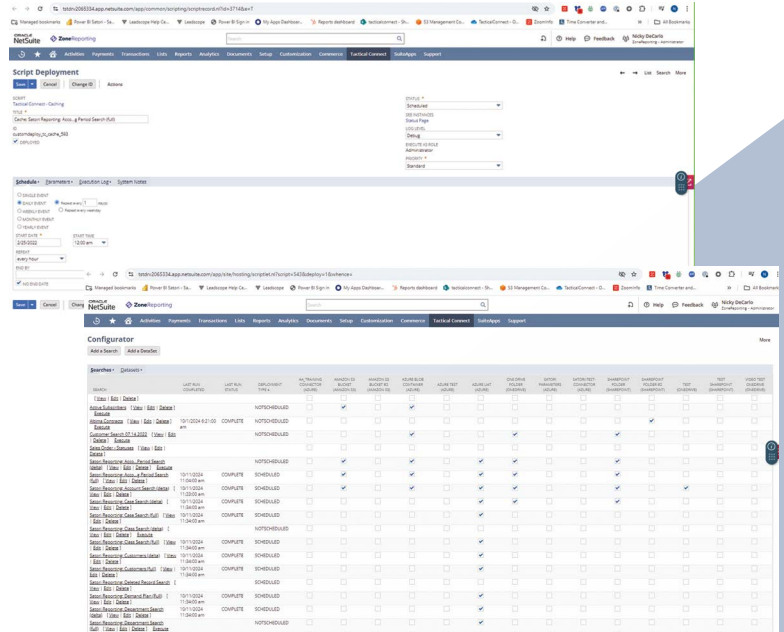

Tactical Connect is a NetSuite native application that pulls your Saved Search data on your set schedule.

Control your data destination

Have full control over your data and its destination. Export NetSuite data as CSV files to your desired location – Sharepoint, Azure Blob, Amazon S3 or OneDrive.

Backup NetSuite data

Ensure you are always ready for disaster recovery in case NetSuite goes down. Tactical Connect can refresh your data as often as every 15 minutes.

We've been using Tactical Connect for over a year and it has become a workhorse for some of our key business areas. At first, it seems rather unassuming – a "little app" that can do a few things. Don't let this "little app" fool you. It is an extremely well-built SuiteApp that allows you to get data out of NetSuite and into the systems and tools that need it.

5-star Customer Review from SuiteApp.com

Top reasons to use Tactical Connect

No timeouts or limits

SuiteAnalytics Connect is designed for static data – but ERP data is always changing. Fetch your dynamic data with Tactical Connect.

Get started in 15 minutes

Since common endpoint integrations are built-in, setup is fast. It takes just a few minutes to get up and running.

200+ happy customers

Customers use Tactical Connect for scheduled backups, connecting with BI tools and integrating NetSuite data to their preferred tool.
