

ZoneCapture

NetSuite-native AP automation

Built Natively in NetSuite

A native NetSuite app that allows you to login as normal, use your existing NetSuite fields, and work directly in the Netsuite platform - no need for back-and-forth with 3rd parties.

Reduced manual data entry

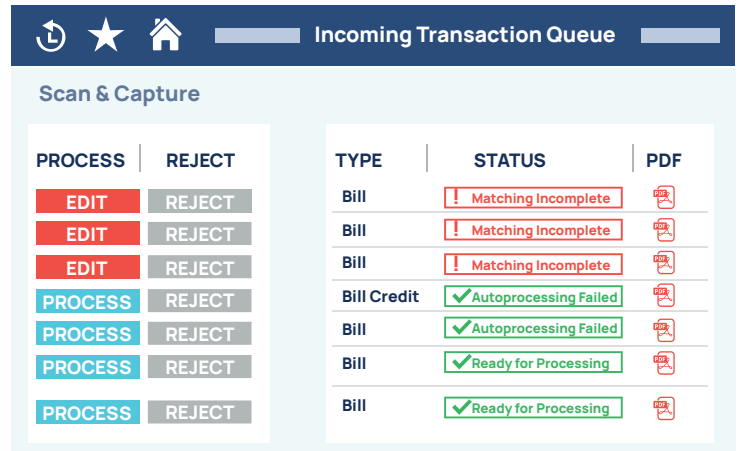

Automate the entry of vendor bills and credits from PDFs and structured e-invoices to streamline the AP process, reducing manual tasks by up to 83%.

Intuitive & accurate

With GenAI and machine learning. Our smart OCR and 3-way matching will accurately capture invoice data and map it to your NetSuite fields.

Scales globally with your business

ZoneCapture supports multi-language, multi-currency, and multi-subsidiary invoice processing—ideal for growing organizations and global finance teams operating across regions.

We went from 2:30 minutes per invoice down to about 45 seconds. For our company when you're looking at 8,000 invoices per month, you add up all that time and we've just saved a ton of time for our company."

Connor Huffman, VP of Corporate Development at Escalante Golf

Top reasons to use ZoneCapture

Automated 3-way matching

3-way matching automatically checks the status of existing purchase orders and receipts down to the transaction line-level detail. We check what you ordered, what you received, and what you billed – to ensure absolute accuracy.

Point-and-click learning

With GenAI and machine learning, ZoneCapture learns header-level fields to automatically input data to the right spot, reducing manual data entry. Plus, custom matching rules automatically apply GL codes to invoices and account for it.

Split-screen view

With a single click, users can view original documents alongside transaction records. This gives you complete transaction visibility from approving to paying, and easy auditing.

Why 1500+ customers choose ZoneCapture

▶ Use your existing NetSuite customizations

ZoneCapture works with your NetSuite fields, workflows, and roles—no external tools required. Easily enhance or extend your existing setup without worrying about integration issues or compatibility with third-party platforms.

▶ Handle any language and page count

Our smart OCR and GenAI can extract data from invoices in virtually any language or format—including multi-page documents—giving you flexibility to scale globally without manual intervention.

▶ Split out consolidated bills

3-way PO matching with line-level recognition allocates costs accurately—even across multiple pages or POs—ensuring complete accuracy with no manual entry required.

▶ Comply with e-invoicing mandates

ZoneCapture supports structured invoice formats to meet growing compliance requirements across the EU and other global markets.

▶ Connect invoice capture with approvals and reconciliation

ZoneCapture integrates seamlessly with ZoneApprovals and ZoneReconcile for a fully embedded AP automation experience—from intake to approval to reconciliation—all within NetSuite.

ZoneCapture is part of Zone & Co's
embedded finance platform for NetSuite.
